‡**Hartwegi (New Butterfly Bush)** the introducer's description: *Hartwegi* is undoubtedly the finest of all the flowering Butterfly Bushes. As a summer cut flower plant and as an ornamental lawn shrub it is unsurpassed in beauty and usefulness. The large bright lavender panicles have remarkable substance and harmonize in arrangement with other summer flowers. The flowers do not "sunburn" as do the other *Davidii* varieties, and the tip flowers on the panicle open before the basal flowers have faded. The individual flowers are closely spaced on the panicles, imparting a compact and pleasing appearance. The foliage is very heavy and is rich dark green.

Buddleia Hartwegi is hardier than any of the summer flowering Butterfly Bushes, having lived through the severe winter of 1935-1936 without protection and with only slight loss.

DOUBLE KOREAN CHRYSANTHEMUMS—Cont. 1937 Introductions

Araby, a deep purplish double variety of a novel shade.

Ember, this is a remarkably hardy and rugged Chrysanthemum which apparently withstands all weather conditions. In color, a brilliant glowing bronze that stands out conspicuously in comparison with any others in this color. It is, in fact, a combination of coral and orange shades that cannot be described accurately, ever changing with the light, but always compelling. The bloom is not too double and of excellent form, 2½ in. in diameter. Flowering in mid-October, it will be particularly desirable if a mid-season variety is wanted. The flowers are quite frost resistant. Height, 2½ ft.

King Midas, in profusion of flowers, there is no double hardy Chrysanthemum comparable to this lovely newcomer. The plants are literally covered with flowers for a very long period, commencing in late September and continuing throughout October. The flowers average 4 in. in diameter, are fully double, and a charming shade of soft yellow with the faintest bronze shadings appear occasionally. A color that blends perfectly with almost any other shade and very effective in itself. Growth very branchy, attaining an average height of 2½ ft. We recommend it without hesitation. Very hardy.

The Moor, here is an introduction that has been greatly admired by many who fancy this particular color, best described as amaranth-purple or port-wine-red. It is noted for its intensity and brilliance in the garden. Flowers 3 in. across, double, produced freely and keep well when cut. In full flower in late September. Height 2 ft. Very hardy. Received Award of Merit at the Boston Orchid Show, October, 1936.

Two New Singles of 1937 Introduction

Nancy Copeland, spectrum-red is the dominant color, according to the Ridgway Color Chart. An opalescent sheen, which varies with the autumn light, produces changeable color effects, always delightful, but impossible to describe accurately. The strong upright plant is completely covered with branching sprays of large, single flowers 3 to 3½ in. across, attaining perfection in late September. Altogether distinct and lovely. Very hardy. Height, 2 to 2½ ft.

Pink Lustre, a fine single flower, 3 to 3½ in. across, with several rays of petals and good substance. It is a delightful shade of orchid (Laelia)-pink, quite distinct among all other pink kinds. Remarkably free, it produces strong branching sprays in profusion throughout October. A sturdy-growing variety, so hardy it will prove invaluable for difficult garden conditions. In full flower in late September. Height 2½ to 3 ft.
